**Understanding this Report P.2**

**National Overview Maps P. 3-5**

**Container Availability by Location:**

- **Ports:** The ports of Los Angeles/Long Beach, New York, Norfolk, and Charleston are expected to have the most available containers among the reported port locations over the next 3 weeks. Container availability estimates for Norfolk and New York increased over the previous week and estimates for Los Angeles/Long Beach and Charleston fell. Over the next 3 weeks, overall availability in New York and Los Angeles/Long Beach is expected to increase while decreases are expected in Charleston and Norfolk.
- **Inland Locations:** Among the reported inland locations, Chicago, Dallas, Memphis, and Columbus are expected to have the most containers available over the next 3 weeks. Each of these locations experienced increases over the previous week. Availability at each location is expected to increase, except for refrigerated containers in Chicago and 20ft reefers in Dallas.
- **Equipment:** Overall, availability of all container types combined was down more than 4,100 units from the previous week and more than 7,300 units over the past 2 weeks.
  - Container availability decreased this week for each container type except 20ft refrigerated containers (see table below). Availability of 40ft dry, high-cube, and refrigerated containers have decreased the most over the past 2 weeks.
  - Availability of 20ft refrigerated containers is up particularly in New York, Los Angeles/Long Beach, and Savannah. This is the fourth week in a row the availability of 20ft reefer containers have increased.

## Understanding this Report

The weekly Ocean Shipping Container Availability Report (OCSAR) provides a snapshot of container availability for westbound transpacific trade lanes at select intermodal locations around the country. The data presented in this report are gathered from the 8 member carriers in the Westbound Transpacific Stabilization Agreement (WTSA). The WTSA carriers include COSCO, Evergreen, Hanjin Shipping, Hapag Lloyd, Yang Ming Transport Corporation, OOCL, K Line, and Hyundai Merchant Marine.

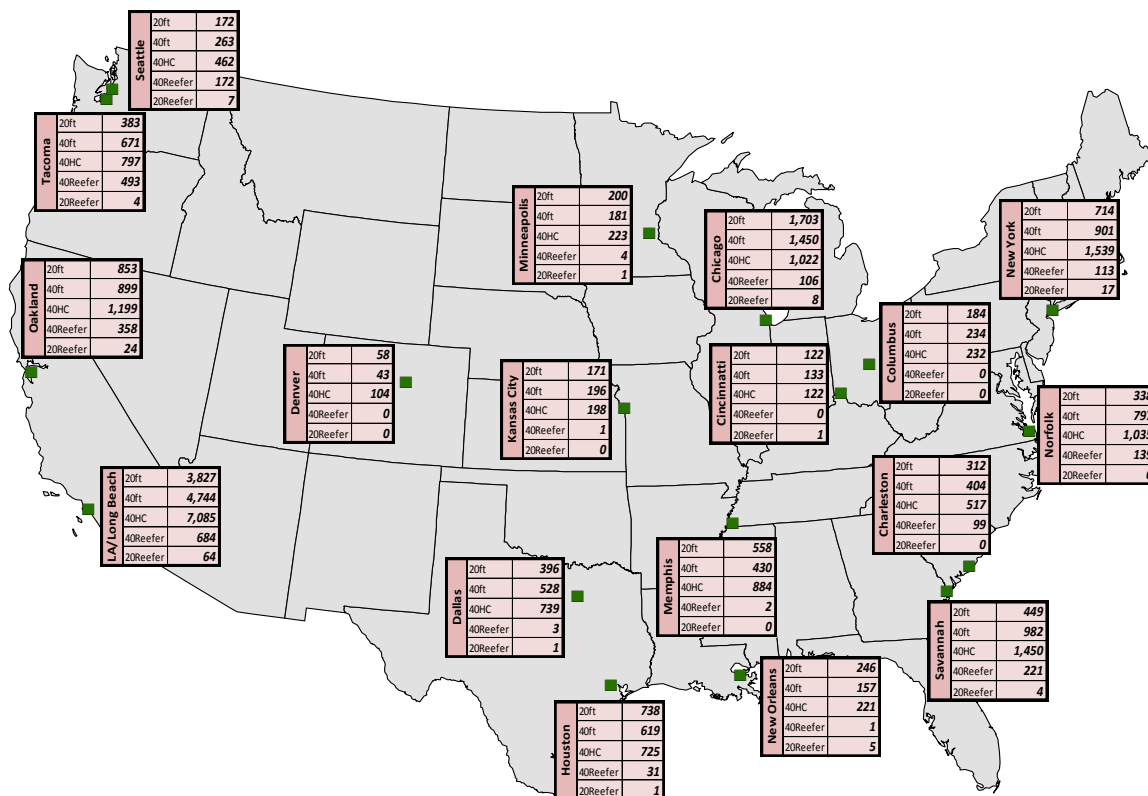

- The data are estimates of container availability per week by the participating carriers. The carriers determine container availability by comparing current supplies at each of the 18 intermodal locations with the demand for these containers based on up-to-date bookings or reservation information in the westbound transpacific trade lane.
- Each week, participating carriers report the estimated number of containers available for the current week (W1) as well as estimates for the subsequent 2 weeks (W2 and W3).
- Maps on pages 3–5 offer a national overview of weekly container availability, as well as an average of availability over the past 6 months. The weekly national data are derived from the sum of the individual carrier responses at each intermodal location.
- Individual carrier responses are presented by location on pages 6–23 and have been sorted from largest to smallest. To maintain carrier confidentiality, specific carrier identification is not provided.
- Carrier responses showing negative numbers, such as -29, should be interpreted as meaning that 29 containers are needed by shippers but the carrier is not able to supply them. A positive number, such as 64, would mean 64 containers are available that are not demanded. An indication of 0 means the carriers have the exact amount of containers needed based on current supply and demand estimates.
- In addition to the weekly container availability data, the participating carriers provide average weekly throughput data for the past 6 months. These data help readers understand the aggregate flow of containers that have moved through the 18 select locations by the 8 participating carriers over the previous 6 months. These data will only be updated every 6 months.
- Availability levels are subject to change, and may be affected by delays in return of equipment to carriers by shippers or consignees, and by free time restrictions imposed by railroads. Due to the dynamic nature of the container industry, carriers cannot be held responsible for the level of availability at the time of inquiry.
- Data presented in the report do not imply availability of chassis.
- Container availability estimates represent availability for all export cargo, not just agricultural products.
- USDA collects these data on a voluntary basis and cannot be held responsible for the status of container availability when a reader makes inquiry with an ocean carrier. USDA relies on the participating ocean carriers to ensure the data is accurate.
- Terminology:
  - 20ft Dry Container (20ft): A standard shipping container that is 20 feet long.
  - 40ft Dry Container (40ft): A standard shipping container that is 40 feet long.
  - 40ft High-Cube (HC): A shipping container which is 40 feet long and 9 feet, 6 inches tall (1 foot taller than a standard 40ft dry container).
  - 40ft reefer: A refrigerated shipping container which is 40 feet long.
  - 20ft reefer: A refrigerated shipping container which is 20 feet long.
  - Chassis: A wheeled frame to which a shipping container can be locked for storage or movement. (Plural chassis)
